

The background of the entire page is a grayscale image of the American flag, showing the stars and stripes. A large red rectangle is overlaid on the left side of the page, containing the main title and subtitle.

TEAM JJ USA

NATIONAL READINESS BLUEPRINT

NOV 2019

UNITY

Connecting our nation across parties, states, and ideas

STRENGTH

Developing national resilience from civilians to military for any threat

ACTION

Enacting solutions today through citizen innovation and leadership

BUILDING A NATION READY FOR THE FUTURE

Building our nation to be ready for the future requires every American to be civically involved. We must also be ready for any threat - strength of mind, body, community, environment, economy, and defense will be important. Finally, we, as an entire nation, must stand up and take action to be ready.

UNITY

We must unite our citizens in order to ensure we are focused on protecting and progressing our nation.

STRENGTH

Whether it be environmental, personal, or from another nation, resilience, stress management, and wellness will need to be prominent considerations throughout the 21st century.

ACTION

Every single citizen is needed to contribute their skills, ideas, and capabilities. We are stronger because of our differences - but only if we use them together.

THE NATIONAL ECOSYSTEM

CONNECTING SOLUTIONS ACROSS ISSUES

ENVIRONMENT

HEALTH CARE

DEFENSE

EDUCATION

ECONOMY

INNOVATION

It is no longer a sustainable plan to design solutions one issue at a time. It is expensive, time-consuming, inefficient, and lackluster in results. A host of other secondary issues also arise.

Alternatively, we can consider the entire system from a different perspective. For example, innovators in the U.S. Government are looking at how health care can be delivered in alternative methods so everyone in the nation has access. Military is looking at how education across the lifetime can be improved to help not only defense but also all citizens. Improved education can aid in national wellness and the environment too.

Across our country, we also have individuals, communities, ideas, and solutions that already exist. They've been tested and proven to work but are rarely implemented at the national level. Why?

To date, our 'siloed' decision making process has led to regulation and money being the primary solution methods. Rather, we recommend that **government needs to be a facilitator of great ideas**. All we need to do is connect the dots.

CONNECTING SOLUTIONS

The first step in building a Ready Nation is to recognize that all issues are connected and all solutions can solve multiple problems.

Solving multiple issues simultaneously

ENVIRONMENT

Regenerating Earth and building resilience.

Connects to:

HEALTH CARE

Using innovation to refocus on wellness.

Connects to:

DEFENSE

Recognizing the responsibility of all Americans.

Connects to:

EDUCATION

Modernizing life long learning for all.

Connects to:

ECONOMY

Using innovation to compete globally.

Connects to:

INNOVATION

Rethinking national issues for better solutions.

Connects to:

WHAT FOLLOWS ARE THE **HIGHLIGHTED SOLUTIONS** ACROSS EACH MAJOR ISSUE AREA. WHEN WE CONNECT THEM, WE HAVE THE HOLISTIC **NATIONAL BLUEPRINT!**

NATIONAL ENVIRONMENTAL STRATEGY

ONE EARTH INITIATIVE

Regenerating the Earth and building resilience through inspiration, innovation, and activation.

1 Inspiring Americans to love the environment is necessary to elicit action and respect for our planet and its inhabitants in order to drive long-term sustainable change.

INSPIRATION

INNOVATION

Innovation needs to focus on solving three key issues: mitigating global temperature rise, aiding the transition to renewable energy sources, and reducing the use of harmful waste items.

3 We must innovate, collaborate, and optimize all assets of our nation – including those of the government but also those available throughout the world.

ACTIVATION

21ST CENTURY HEALTHCARE

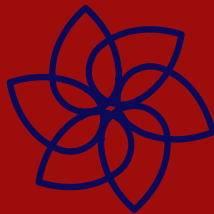

Combining research, innovation, and existing programs to improve access, quality, and efficiency in healthcare.

PREVENT

Focusing on wellness and prevention is the most effective approach for improving overall health and reducing cost.

CONNECT

Healthcare is an ecosystem of people, care givers, and infrastructure that needs to be coordinated to achieve quality efficient care for all.

DELIVER

Access and delivery of healthcare services need to capitalize on advanced methods and technology to support all Americans.

NATIONAL SERVICE STRATEGY

SERVICE

The concept of service to our country must be expanded. We need to recognize that all citizens can contribute to the stability and readiness of the nation because when we combine all our assets, skills, and capabilities across citizens, communities, and states, we are better able to care for our country and defend our nation from external threats.

COMMUNITY

Significant resources exist across the nation in the form of individual citizens, programs, and governmental agencies. What is missing is the connecting force between these entities. Combining efforts can multiply the effects of volunteer and citizen-financed actions. Government funding for the connecting units can optimize impact.

DEFENSE

A significant number of documents already exist that outline the current and near-term efforts required to sustain and improve the defense department. Added to these strategies, we emphasize: Human Factors, Science and Technology, Fiscal Stability, and Public-Private partnerships for intellectual dominance.

NATIONAL EDUCATION STRATEGY

The future of education for the United States will necessarily require Americans to learn continuously across the lifetime and be ready for the changes expected from automation, globalization, and digitization.

Learning must be recognized as an individual experience aimed at inspiring curiosity, innovation, self-regulation, and fulfillment.

1. LIFE LONG LEARNING

Preparing Americans for the 21st century requires us to empower our citizens to learn across the lifetime. We need system reform as well as a change in our approach to developing and inspiring young people.

2. TEACHING AND LEARNING READINESS

Teachers need the resources required to teach effectively provided to them, not provided by them. Teachers need pay commensurate with their service and students need the food, home, and educational resources required to be ready to learn and successful in the classroom.

3. OPTIMIZATION

It is time we stopped standardizing Americans and start optimizing their individual skills. Personalized learning allows for each citizen to realize his or her full potential in a manner best suited to their learning interests, pace, and capabilities. By making education real-world focused, we ensure that what's learned can be applied to life, jobs, and future learning.

NATIONAL ECONOMIC STRATEGY

Optimize

Optimizing the economy requires the United States to approach the movement of money through the nation as an ecosystem that includes housing options, talent identification, citizen career empowerment, increased revenues from outside the country, and decreased government spending.

Empower

Empowering our citizens will require our education system to change from being a standardization process that ends by early adulthood to one that promotes individual skills and capabilities and that ensures access to learning through age 75.

Compete

Competing globally is a growing necessity that will be pervasive before the end of the century. We must come together as a nation to promote our creativity and diversity as unique American assets that can attract the best jobs for our people.
